
A.C.T FACILITY — ANOMALY FILE
Anomaly Containment Transformation

DESIGNATION: **AFD-CH-000**
Verified archive designation
Historical first-preserved containment entity
TITLE I: **THE SLUMBERING SERPENT GOD**
TITLE II: **ITHYOS, THE WORLD-SLEEPER**

FIELD TYPE: **CH — Cosmic Hazard**

CLEARANCE REQUIRED: **05 Access**

CLASSIFICATION

CONTAINMENT CLASS: **TIAMAT**

FRACTURE INDEX —
CONTAINMENT: **ABSURD**

THREAT LEVEL: **10**

FRACTURE INDEX —
SUB-THREAT: **NONE**

TRANSFORMATION
VIABILITY: **INVIOLEABLE**

DISCOVERY

DATE OF DETECTION: [PRE-DOCTRINAL / EXACT DATE REDACTED]
VERIFICATION DATE: [SEALED / PRE-ARCHIVE ERA]
LOCATION: Earth Core Region / ABYSS Floor Contact Zone
DISCOVERY METHOD: Seismic anomaly correlation / Deep-earth
 expedition loss sequence / Early psychic
 witness convergence

INITIAL RESPONSE
OPERATION: First Deployment
RESPONDING UNIT: Pre-A.C.T Containment Authority
RESPONDING FIELD
OPERATOR: [ARCHIVE SEALED]
CIVILIAN EXPOSURE: Minimal
AMNESTIC DEPLOYED: No — Pre-standardized era
NARRATIVE STATUS: Controlled / Buried / Myth-fractured

DESCRIPTION

AFD-CH-000, designated ITHYOS, THE WORLD-SLEEPER, is a planetary-scale serpentiform entity estimated at approximately 10 kilometers in length. The anomaly is believed to remain dormant within the Earth's core region, though total body confirmation is incomplete due to extreme inaccessibility, structural interference, and abyss-level observation limits.

ITHYOS is classified as a Cosmic Hazard rather than a standard biological subject due to its scale, its interaction with planetary stability, and the fact that meaningful containment does not consist of physical enclosure of the full body. Modern A.C.T containment recognizes that the Facility does not contain the entity in the ordinary sense; rather, it contains access, observation, disturbance, and wake-state conditions surrounding the entity.

The anomaly remains in a sleep-like state. Even so, minor involuntary movement during dormancy is sufficient to generate measurable seismic activity across the globe. No verified full waking event exists in surviving A.C.T records.

ANOMALOUS PROPERTIES

PRIMARY EFFECT: Planetary-scale dormant presence. Minor physical movement while asleep is capable of generating earthquakes approximating magnitude 3.0. The anomaly also emits a sovereign serpentine dominance effect over serpent-class organisms and a lethal psychic proximity response in humans.

SECONDARY EFFECT: Human witnesses within unsafe proximity report vivid, intrusive visions of the anomaly opening its eyes and staring directly at them despite all physical indicators confirming continued dormancy. Affected subjects may suffer immediate insanity, compulsive glyph transcription, and terminal cardiac failure within approximately 24 hours.

TRIGGER CONDITION: Proximity / exposure to abyss-level influence zone

RANGE / AREA OF INFLUENCE: Planetary-scale seismic influence / localized psychic proximity field / variable biological dominance field

TEMPORAL BEHAVIOR: Constant / Dormant-state persistent

REALITY INTERACTION: Structural Weakening / Planetary Stress / Unknown deeper cosmological interaction

CONTAINMENT PROCEDURES

ITHYOS is not contained through conventional enclosure. Containment is defined as the preservation of dormancy and the restriction of all access, observation, excavation, ritual interference, biological interaction, and wake-state destabilization.

The anomaly is managed through the ABYSS Floor, a non-standard terminal containment stratum beneath F-xxxx. The ABYSS Floor functions as the nearest stable human-operable interface to the anomaly's reachable influence boundary. No personnel below 05 authority are permitted unrestricted file access or direct abyssal descent authorization.

No unapproved descent is permitted.
No serpent-type specimen is permitted within authorized lower routes.
No direct line-of-sight exposure is authorized outside shielded observation systems.
No written transcription recovered from exposed victims may circulate without sealed archive review.

CONTAINMENT SITE: ABYSS Floor / Final Contact Vault
CONTAINING DIVISION: Containment Division / 05 Oversight
REQUIRED PERSONNEL: 05-cleared containment operators, abyss medical isolation staff, sealed observation monitors, anti-reality systems personnel
MONITORING FREQUENCY: Continuous
MAINTENANCE CYCLE: Continuous
BREACH PROTOCOL: ABYSS-SEAL / WORLD-SLEEPER DORMANCY FAILURE

BREACH CONDITIONS —
THIS ANOMALY IS CONSIDERED
IN BREACH IF IT:

- ☐ Breaks formal containment
- ☒ Endangers public normalcy
- ☒ Causes distortion in reality, Earth, time, or cosmic law
- ☒ Spreads memetic, informational, or biological contamination
- ☒ Resists classification and escalates beyond predicted behavior
- ☒ Transforms its environment into an anomalous zone
- ☒ Other: Any sign of wake-state transition, large-scale tectonic irregularity, abyss-seal degradation, or global serpent-class biological convergence event

RESEARCH LOG — SUMMARY

LEAD RESEARCHER: [05-RESTRICTED]
CURRENT RESEARCH PHASE: Observation / Theoretical Modeling

SUMMARY OF FINDINGS:

ITHYOS remains dormant. Current consensus holds that A.C.T does not meaningfully imprison the anomaly in full physical terms, but instead maintains an engineered sleep-preservation environment around the reachable abyssal interface. Psychic exposure remains uniformly lethal without adequate mental resilience and protective protocol.

Observed victim progression remains consistent:

1. visual intrusion of apparent awakening
2. psychological collapse
3. compulsive transcription of unknown language
4. sudden cardiac arrest near the 24-hour mark

No successful interpretation of the recovered script has been authorized for general research circulation. Long-term review suggests that ITHYOS may have served as the first living proof that structural reality can be held in balance only through deliberate suppression of impossible entities.

TRANSFORMATION STATUS

CURRENT VIABILITY: INVIOABLE

TRANSFORMATION ATTEMPT

HISTORY: Number of attempts: 0
Result of most recent attempt: N/A

TRANSFORMATION NOTES:

Transformation is permanently prohibited. Any structural interference, wake-state manipulation, biological sampling, psychic extraction, or containment-conversion concept is judged existentially irresponsible. ITHYOS is not a candidate for stabilization beyond preserved dormancy, nor for repurposing, neutralization, or integration.

INCIDENT LOG — SUMMARY

TOTAL INCIDENTS: [05-RESTRICTED]
LAST INCIDENT DATE: [REDACTED]
HIGHEST SEVERITY: Critical

NOTABLE INCIDENTS:

- Early exposure victims entered compulsive glyph transcription phase and expired by cardiac arrest within 24 hours.
- Historical abyssal descent attempts prior to modern shielding caused immediate psychological collapse in under-screened personnel.

- Multiple minor global seismic events have been correlated with dormant muscular movement while the anomaly remained asleep.
- All notable events are considered formal structural concern events even when no conventional chamber breach occurs.

PERSONNEL RECORD

ASSIGNED PERSONNEL: [ABYSS ACCESS ONLY]
PREVIOUSLY ASSIGNED: [05-RESTRICTED]
CASUALTIES: [SEALED]
AMNESTIC-ADMINISTERED: N/A / early cases pre-standardized
E-CLASS ASSIGNED: No

REALITY THEORY NOTES

STRUCTURAL REALITY

IMPACT: Severe Destabilization

MINOR PAUSE

CORRELATION: Suspected

COSMIC TIMER

ITERATION LINK: Unknown / 05-level unresolved

REALITY BENDING

OBSERVED: Yes – the anomaly demonstrates non-local planetary influence while dormant, sovereign serpentine biological dominance, and lethal psychic perception response without verified waking motion. The exact law being bent remains unresolved.

THEORY NOTES:

ITHYOS is widely considered the first anomaly to force the Facility into formal containment doctrine. Later A.C.T philosophy concerning secrecy, sleep-preservation containment, abyssal access restriction, and structural reality balance all trace directly or indirectly to the continued dormant existence of this anomaly. Internal doctrine holds that some entities do not need to wake to threaten the world. Their continued sleep is itself a containment condition.
